Summary

This is a bracket system designed for the DeskPi RackMate T1 which houses a Synology DiskStation 418 NAS.

This was designed to house my Synology DS 418 at the bottom of my RackMate T1. It may be possible to install this solution at other positions but this was not my intent. Same goes for other models of Synology NAS units.

In my case installing a plate above the unit on front and back provides sufficient support to keep the unit from moving vertically.

Make sure to mirror the back bracket so you end up with one for each side.
